Talk on STEM for Sustainable Development

Date : 15th April 2018 (Sunday)
Time : 7.00pm – 8.30pm
Venue : Seminar Room 2, Hills Shopping Mall, Kuching
Speaker : Prof Ir. Dr Andrew Ragai Henry Rigit

SYNOPSIS

Science, Technology, Engineering and Mathematics (STEM), are vital disciplines to our future, the future of our country, the future of our region and the future of our children. STEM comprises of Physics, Chemistry, Mathematics and Biological sciences, providing the complete knowledge and understanding of the Nature and the Universe. Physics deals with the knowledge of nature, study of matter, its motion and behavior through space and time, along with concepts related to energy and force. Its main theme is to understand how the universe behaves and sustains. Whereas Chemistry is the scientific discipline involved with the atoms, molecules and compounds that undergoes changes when they interact with each other to form new useful materials. Mathematics attains the status of the mother of sciences because it is the language that demonstrates the scientific description of physical or chemical nature, related to any phenomenon or process prevailed within the nature or industry. Biological sciences deal with the knowledge of living things. All these four branches of learning are introduced at the school level and have been taught with increased level of breadth and depth till highest level of study i.e. PhD. The essence and beauty of these subjects lies in the fact that their roots go deep into the transformation of a society from an aboriginal society to the technological advanced society. The transformation of knowledge of science to some practical embodiment always brings great benefits to the society.

OBJECTIVE

To highlight the importance of STEM and how they are fundamental disciplines required for sustainable development.
