SAFETY MANAGEMENT IN CONSTRUCTION INDUSTRY

HSE Management Enhancement Program in CSTR

2 July 2022, Saturday

● 9am - 12pm @ IntEC Kuching ●

About This Seminar

Comprehensive planning, monitoring, and control over health and safety responsibilities are essential for the success of your construction project. A safety management system prevents the worst-case scenario from happening on one of your sites, reducing accidents and driving employee morale in one go. Effectively managing safety is a daunting task.

A safety management system in Coastal Road & Second Trunk Network Project (CSTR) includes all safety-related activity on a work site. Whether it's hazard identification and safety policies to safety plans, objective setting, safety training schedules, and reporting procedures, the project management consultant map out the entire management structure extensively, to guide contractors to run the operation on site safely.

Under the HSE Management Enhancement Program, a more systematic collaboration introduced between Project Management Consultant, Supervising Consultant and Contractor is formed to handle safety-related issues effectively and efficiently.

Speaker

**Mr. Ignatius Nyaleng
Ak Simon Jalin**

*Head of HSE for
Sarawak Coastal Roads &
Trunk Network Project (CSTR)
